Demo website

January 15, 2022

How it works

The application works like a regular website, it needs a Local Server with access to the Internet or Hosting to run.

You need to create a database. The DB file worktask.sql is located in the root folder

DB connection settings need to be edited in the file: core\DbConnection.php

Application Logic - MVC

Registration page: SignIn -> Register

Registration Form: Login, Name, Last Name, Email, Password

All input fields are checked for 'bad' characters, Email, Password fields are checked for presence in the users table. If there are matches, then the user sees a message about this and registration is not possible. If everything is OK, you are redirected to the Sign In page

Controller: app\controllers\RegisterController.php

Model: app\models\Register.php

Sign in page

Sign in form: Login, Password. Input fields are checked for 'bad' characters and for presence in the users table. If no matches are found, the user sees a message about it and login is not possible. If everything is ok, you are redirected to the main page.

After logging in, the user sees the greeting 'Hi, login' instead of Sign in. When clicked, a popup appears with two links - Account and Log Out.

Controller: `app\controllers\SigninController.php`

Model: `app\models\Signin.php`

Personal account. You can change Name, Last Name and Password

Input fields are checked for 'bad' characters.

Controller: `app\controllers\AccountController.php`

Model: `app\models\Account.php`

The order information page -> Orders

The user sees three blocks with titles suggesting a specific action. When you click on a block, the corresponding information appears.

You can view DB requests in: `app\models\Orders.php`

The corresponding controller is `app\controllers\OrdersController.php`

What was used

PHP 7.4, SQL 5.7, Bootstrap 5.0, jQuery

Notes

A more 'advanced' version of the template used can be found here:

<https://template.getyoursite.info/>

When registering, the user receives an email to confirm registration, and receives another email if the confirmation was successful.

You can change the password if you forgot, but there is an email. You can send a message on the Contact Us page

The entire code can be viewed here <https://github.com/VladULazarev>
